

SHORT EXPLANATION OF CLASSES :

User — Base class for all platform users. Stores common authentication and profile information shared across all user types.

Learner — Default role assigned to every new user. Can learn skills from others, teach skills they possess, and apply to become a verified Mentor.

Mentor — A Learner who has been verified by an Admin. Can accept mentorship requests and validate learner skills by assigning a score and feedback.

Admin — Assigned to one specific skill category. Reviews mentor applications for that skill, and manages user moderation (warnings, suspensions, deletions).

MentorApplication — Tracks a Learner's request to become a Mentor for a specific skill. Records application status, submission date, admin decision, and reapplication eligibility.

MentorCredential — Supporting documents attached to a mentor application such as CV, portfolio, LinkedIn profile, or certificates.

MentorSkill — Links a verified Mentor to the specific skill(s) they are approved to mentor, along with who verified them and when.

SkillCategory — Represents a skill domain on the platform (e.g. Web Development, Graphic Design). Each category has one assigned Admin responsible for it.

Skill — A skill claimed by a user on their profile. Can be self-declared or validated by a Mentor with a score between 0 and 100.

SkillEvidence — Supporting proof attached to a skill entry such as a portfolio link, GitHub repo, certificate, or project.

ValidationRequest — A formal request from a Learner asking a Mentor to assess and validate one of their skills.

SessionRequest — A request sent by a Learner to book a learning session with a teacher. Tracks status, skill, and scheduling details.

Session — The actual learning session between a teacher and a learner. Records duration, completion status, and triggers credit transfer.

SessionReview — A rating and comment left by either participant after a session is completed.

CreditBalance — Stores the current credit balance for each user, updated after every session or admin adjustment.

CreditTransaction — Records every credit movement on the platform, whether earned, spent, or adjusted, with a full history per user.

Conversation — A direct messaging thread between two users.

Message — An individual message sent within a conversation.

Notification — A system alert sent to a user about session requests, validation updates, messages, or admin actions.

Report — A violation report submitted by a user against another user. Assigned to an Admin for review and resolution.

AuditLog — A record of every significant admin action taken on the platform for accountability and traceability.

SystemSettings — Stores platform-wide configuration values such as initial credit allocation and reapplication waiting periods.

PlatformStatistics — Aggregated platform metrics such as total users, sessions, mentor approval rates, and credits in circulation.
